

Net Zero Servant Leadership Certificate in Sustainable (Healthcare)

We are proposing to deliver a six-month professional development course in Net Zero servant leadership for a cohort of 20 NHS clinicians using Coventry University bespoke AULA platform, monthly half day sessions on client sites and the final peer problem sprint event.

The NHS has a need to be world's first net zero national health service by 2045 and have set two main targets; the NHS Carbon Footprint and NHS Carbon Footprint Plus. This course is to support the second target – the need to influence the NHS carbon footprint through servant leadership. The course combines existing NHS training resources around Net Zero leadership with bespoke modules in

- (A) Energy-specific pro-environmental behaviour (EPEB) Road mapping
- (B) Place based decarbonisation Influencing Strategy and
- (C) Environmentally specific servant (ESL) leadership approach in Healthcare Sector

This stackable micro credentialed certificate course is designed as a bespoke Net Zero leadership training personal behaviour which is focussed on consumption side dynamics and personal leadership behaviour of key stake holders, tasked with the transforming organisations towards their Net Zero targets

Unique features and benefits

- Provides a Bespoke tailored course that supports Clinical leaders in NHS with a better NetZero transformation tool kit, to influence the NHS carbon footprint through servant leadership
- Mapping existing organisational resources around Net Zero into the course. Identification and co-opting key champions from the Client into delivery. e.g Net Zero leaders.
- Combine three separate concepts (servant leadership + energy-specific pro-environmental behaviour (EPEB), environmentally specific servant leadership (ESL) framework and bespoke existing net zero training resources of the NHS into a single cohesive Net Zero framework.
- Stackable Micro-Credential that can be mapped to CUG courses.

The CPD course is a topical course that will appeal to clinicians. CU group has already received excellent feedback from a similar Pilot training to Clinicians in the NHS. This unique design of this course will ensure that the established track record and reputation of the programme is sustained and enhanced, to exceed the requirements of the NHS net zero needs, as it involves personalized reflective experiential learning approaches. This course is aligned with the Department for Energy Security & Net Zero Systems Leadership Guide: how to be a systems leader and systems approaches model to modify leadership pattern of behaviour over time.
